

David Fernandez Verdejo

*PhD student at
Biodegradation of Industrial Contaminants
and Waste Valorisation (BioremUAB)
of Universitat Autònoma de Barcelona*

I studied the degree of Biotechnology and the master of Environmental Science and Technology in the Universitat Autònoma de Barcelona (UAB). I did my master thesis in the research group of Biodegradation of Industrial Contaminants and Waste Valorisation (BioremUAB) from the Chemical, Biological and Environmental Engineering Department from the same university, and currently I am in the same group studying my PhD. My research revolves around the bioremediation of organohalogenated pollutants by employing anaerobic bacteria and the application of electrochemical systems.
